

How to use T_EX

26 december 2009

1 How to use T_EX

T_EX is a typesetting language [?]. Instead of visually formatting your text, you type your text combined with commands in a plain text file.

You can use macro packages like L^AT_EX. TeX is a superb typesetter and is therefore very good at formulas:

$$\Omega_0 = \left(\frac{\alpha}{\beta}\right)^4$$
